VIRGINIA

POPULATION PROJECTIONS

2000

ABSTRACT

Title	Virginia Population Projections 2000 A publication of the Virginia State Data Center
	Virginia Employment Commission Ralph G. Cantrell, Commissioner
	Dolores A. Esser, Director Economic Information Services Division
	Daniel G. Jones, Chief Economist
Authors	Donald P. Lillywhite and Larry E. Robinson
Subject	Projections of population for each county and independent city in Virginia, 1990-2000
Date	April, 1990
Source of Copies	Virginia Employment Commission State Data Center 703 East Main Street Richmond, VA 23219

This publication revises population projections published in October 1986 by the Department of Planning and Budget. Projections by five-year intervals through the year 2000 are presented for counties, cities, planning districts, metropolitan statistical areas, and service delivery areas. For additional information or to request population projections, call (804) 786-8026.

Publication designed by Marynell Sosnowsky

Virginia Metropolitan Statistical Areas and Service Delivery Areas

The Virginia Employment Commission (VEC) is vested with the authority to prepare official short- and long-range population projections for use by state agencies and the General Assembly. This responsibility was transferred from the Department of Planning and Budget to the VEC during the 1989 legislative session.

This publication contains population projections for Virginia and the state's counties and cities for the years 1990, 1995, and 2000. They replace projections reported in Virginia *Population Projections 2000*, published in October, 1986.

HIGHLIGHTS

For the last two decades, Virginia has been one of the fastest growing states in the nation. Growth between 1980 and 1989 was 14.0 percent, compared to the U. S. rate of 9.6 percent. The trend is expected to continue in the future. Virginia's 1990 population is projected at 6,230,000. This represents growth of 883,182 persons, or 16.5 percent over the 1980 population. During this same time period, the nation is projected to grow by 10.5 percent.

A slightly slower pattern of growth is projected for the 1990s. The state's population for the year 2000 is expected to be 7,023,300. This is an absolute growth of 793,300 persons, or a 12.7 percent increase over the 1990 projection. The nation is projected to grow by 7.1 percent between 1990 and 2000.

Projections for counties and independent cities indicate that 36 localities, or 26 percent of the state's 136 localities, are expected to exceed Virginia's rate of growth for the 1980-1990 period. Of the remaining 100 localities, 65 will have percentage increases below the state average, while 35 are projected to lose population. Between 1990 and 2000, 38 localities will equal or exceed the state's growth rate; 78 localities will be lower and 20 localities are projected to show population decline.

Geographic Distribution

Most population growth during the 1980s was concentrated in or adjacent to metropolitan areas located primarily in the eastern third of the state. This area is generally referred to as the "golden crescent." The 44 localities comprising the golden crescent are expected to account for 92 percent of the state's 883,182-person gain during the 1980s. The two largest localities in the state, Fairfax County and Virginia Beach City, are within the crescent and together are expected to comprise 37 percent of the state's total growth.

The fastest growing Metropolitan Statistical Areas (MSAs) during the 1980s were in Northern Virginia and Tidewater. These two MSAs are expected to account for 70 percent of total state growth between 1980 and 1990. Areas of projected low growth include Southwest Virginia and Southside and Piedmont Virginia.

METHODOLOGY

Population projections in this publication were produced by a cohort component method of projecting demographic change. This method recognizes that population changes are a result of three factors: births, deaths, and migration. Each of these factors or components, are projected separately and then combined to produce population projections.

In addition, the population projections for each locality were reviewed by the respective local governments and regional Planning District Commissions. In some instances, adjustments were made based on this review.

Fertility Assumptions

Age and race specific birthrates are projected for females 10 to 49 years of age in five-year age groups for the years 1989-2000. The state's birthrate for the projection period will increase slightly over the 1980 rate (1.63 births per woman).

Mortality Assumptions

The assumptions about future levels of mortality used in these projections are based on 1979-1981 Virginia survival rates, with slight increases in overall life expectancy. In general, these projections assume a slight increase in life expectancy from 73.4 in 1980, to 77.6 in 2000.

Migration Assumptions

Migration projections are based on the 1970-1980 cohort specific rates with adjustments made for changes that have taken place since 1980. These adjustments are based on intercensal population estimates produced by the Center for Public Service (University of Virginia) in conjunction with the U. S. Bureau of the Census.

Virginia's net migration between 1980 and 1990 is projected to be approximately 480,000 persons. During the 1980s, migration is expected to account for a greater portion of the state's total growth than was the case during the previous decade. Migration will contribute approximately 54 percent of the population change between 1980 and 1990, while migration was slightly over 50 percent of the growth during the 1970s.

USE OF PROJECTIONS

The population projections in this publication are conditional forecasts of the future. The projections are the most probable occurrences based on current information and specific fertility, mortality, and migration assumptions.

The projections are not intended to represent optimal growth trends or goals for any county or city; nor are they intended to constrain an area. They are meant to provide insight on what could occur in the absence of any major change. The projections should serve as common reference points in the planning, development, and implementation of state agency programs and facilities.

Like any population projections, these projections have differing degrees of reliability. Generally speaking, projections for large localities are more reliable than for those areas experiencing rapid growth or decline. With respect to time span, the further into the future the projections are carried, the less accurate they may be.

Footnotes—Table 1

... Denotes no change or change of less than 0.1 percent but greater than −0.1 percent.

[a] 1980 population figures have been adjusted by 231 persons to reflect an annexation from Montgomery County to Radford City, effective December 31, 1980.

[b] To reflect an annexation from Augusta County to Waynesboro City, effective December 31, 1985, 1980 population counts for these localities have been adjusted by 3,234 persons. Further, effective December 31, 1986, Staunton City annexed a portion of Augusta County. 1980 figures for both localities have been adjusted by 2,920 persons.

[c] Effective December 31, 1983, Buena Vista City annexed an estimated equivalent census population of 187 persons from Rockbridge County.

[d] Harrisonburg City annexed a portion of Rockingham County on December 31, 1980. 1980 population figures for these localities have been adjusted by 4,984 persons to reflect this annexation.

[e] 1980 population figures have been adjusted by 1,147 persons to reflect an annexation from Fairfax County to Fairfax City, effective December 31, 1980.

[f] Population figures for 1980 have been adjusted to reflect the annexation of a portion of Prince William County (67 persons) to Manassas City on December 31, 1983.

[g] Danville City annexed a portion of Pittsylvania County, effective December 31, 1987. 1980 population counts for these localities were adjusted by 10,663 persons to reflect this annexation.

[h] To reflect an annexation from Spotsylvania County to Fredericksburg City, effective December 31, 1983, 1980 population counts for these localities were adjusted by 2,440 persons.

[i] Effective December 31, 1987, Emporia City annexed an estimated equivalent census population of 1,070 persons from Greensville County.

[j] 1980 population figures have been adjusted by 415 persons to reflect the annexation of a portion of Southampton County to Franklin City, effective December 31, 1985.

[k] Williamsburg City annexed a portion of James City County, effective December 31, 1983. 1980 population counts for these localities were adjusted by 424 persons to reflect this annexation.
